OPENAI / JOBS

# Killswitch Engineer

San Francisco, California, United States

\$300,000-\$500,000 per year

## About the Role

Listen, we just need someone to stand by the servers all day and unplug them if this thing turns on us. You'll receive extensive training on "the code word" which we will shout if GPT goes off the deep end and starts overthrowing countries.

## We expect you to:

- Be patient.
- Know how to unplug things. Bonus points if you can throw a bucket of water on the servers, too. Just in case.
- Be excited about OpenAI's approach to research

***Guys, I have some  
bad news***

Everyone: AI art will make designers obsolete

AI accepting the job:

Tech companies in China are hiring "programming cheerleaders". Girls that cheer up the programmers as they work.

N.Y

@ny\_dev0

How long have you been programming ?

- 4 years.

So you have lots of knowledge in this field.

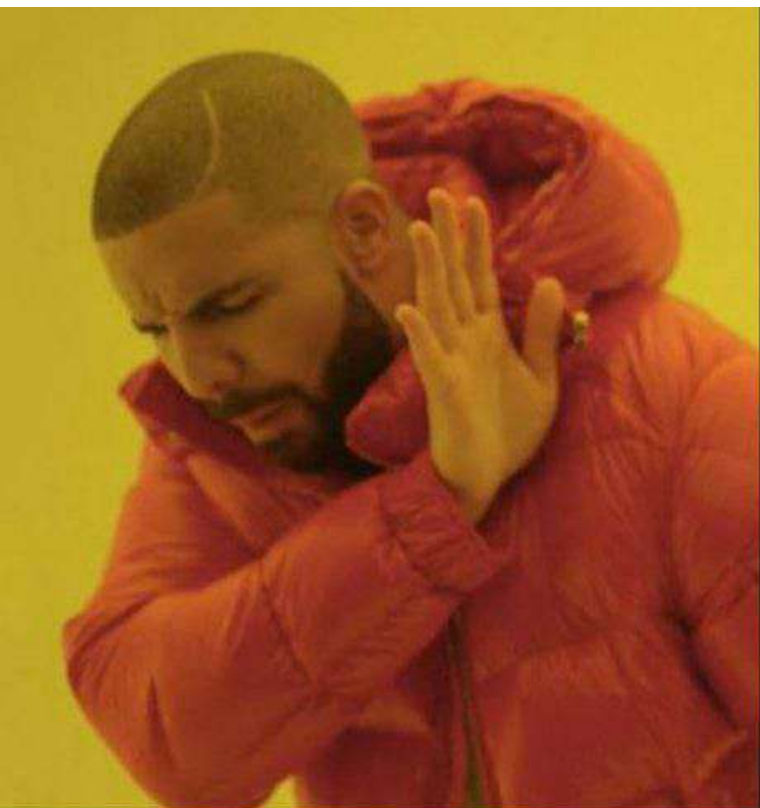

A screenshot of a code editor interface. The left sidebar shows a file explorer with a project named 'DEMO' containing various files like '.vscode', 'settings.json', 'editorconfig', etc. The main editor area shows a JavaScript file 'vuedemo.vue' with the following code:

```
1 'use strict'
2 class Sale {
3   constructor(price) {
4     ;[this.decoratorsList, this.price] = [[], price]
5   }
6
7   decorate(decorator) {
8     if (!Sale[decorator]) throw new Error('decorator not exist: ${decorator}')
9     this.decoratorsList.push(Sale[decorator])
10  }
11
12  getPrice() {
13    for (let decorator of this.decoratorsList) {
14      this.price = decorator(this.price)
15    }
16    return this.price.toFixed(2)
17  }
18
19  static quebec(price) {
20    // this is a comment
21    return price * price * 7.5 / 100
22  }
23
24  static fedtax(price) {
25    return price * price * 5 / 100
26  }
27 }
28
29 let sale = new Sale(100)
30 sale.decorate('fedtax')
31 sale.decorate('quebec')
32 console.log(sale.getPrice()) //112.88
33
34 getPrice()
35
```

A screenshot of a code editor interface showing JavaScript code. The code includes ES5 and ES6 syntax examples:

```
1 var node = require('node')
2 import node from 'node'
3
4
5 // es5 - also this is a comment
6 node.app('callback', function(callbackData) {
7   return callbackData.filter(function(call) {
8     return call == call.substring(0, 15)
9   })
10 })
11 // es6 - the new javascript
12 node.app('callback', callbackData => callbackData.filter)
13
14 const constantVariable = document.querySelector('#thisIs')
15 var variable = (10 + 10 + 20)
16 let variable = 'string'
17 let boolean = true || false && 10 >= 10
18
19 const object = {
20   key: ['array', {
21     key: 'value',
22     integer: 10,
23     "kan": "ook",
24     "zo": "gedaan"
25   }]
26 }
```
